

1 ACLs (Access Control Rules)

- **Table vs Field:** Both must pass; field ACL does not override table ACL.
- **Script evaluation:** False = deny.
- **Multiple ACLs:** All matching ACLs must evaluate true.

2 Update Sets

- Capture **configuration changes only**, not data records.
- Must **move manually** between instances.
- Pay attention to dependencies between changes.

3 Reference Fields & Display Values

- **Display field** = what shows in lookups.
- **Label** = field label on form.
- **Name** = internal database field name.

4 Business Rules & Execution Order

- **Before insert/update:** runs pre-save.
- **After insert/update:** runs post-save.
- **ACLs run before everything.**
- Execution flow: ACL → Client Scripts → UI Policy → Business Rule.

5 Client Scripts & UI Policies

- Client Script = JavaScript logic (validate/modify fields).
- UI Policy = show/hide, read-only, mandatory (declarative).
- Triggers: OnLoad, OnChange, OnSubmit.

6 Tables & Fields

- Field added to parent table → appears on all child tables.
- Table extensions inherit fields and ACLs.
- Know core vs custom fields.

7 Notifications & Inbound Actions

- Can create/update records **or** send notifications.
- Scripted actions can modify multiple fields.
- Always test in sub-prod instance.

8 Service Catalog & Workflows

- Record Producer → creates record from catalog form.
- Catalog Item → triggers workflow.
- Variables map to target table fields.

9 Reporting & Dashboards

- Performance Analytics ≠ standard reports.
- Filters ≠ conditions; understand difference.
- Scheduled reports do not automatically update real-time dashboards.

10 Scoped Apps & Roles

- Roles can be global or scoped.
- App access depends on **user role AND application scope**.
- Scoped app tables have separate ACL evaluation.

💡 **Pro Tips:** - CSA tests platform logic more than coding. - Focus on **ACL logic, inheritance, and platform behavior**. - Practice using the PDI to reinforce concepts. - Scenario-based questions often test your understanding of “what actually happens” rather than definitions.

Print this, keep it over your cubicle, and glance at it before studying or attempting questions.
